As the global community works toward achieving the Sustainable Development Goals, too many young people remain disconnected from vital skills, economic opportunities, local communities, and national governments. Investment in youth is urgently needed at this moment in history when half the world’s population is under 30.

The 2017 Global Youth Wellbeing Index includes 30 countries selected based on population size, data availability, income level, and regional distribution. They are home to almost 70 percent of the 1.8 billion young people ages 15 to 29 worldwide. To give voice to that generation of citizens, the 2017 Index incorporates youth perceptions data collected through the International Youth Foundation’s Global Millennial Viewpoints Survey. The Index addresses seven of the 17 Sustainable Development Goals.
1. **YOUTH WELLBEING IS IMPROVING SLOWLY.**
   Using the same set of indicators as the 2014 Index and updating data where available, youth wellbeing in all Index countries improved by an average of 2 percent.

2. **ONLY 11 PERCENT OF YOUTH IN INDEX COUNTRIES ARE EXPERIENCING HIGH LEVELS OF WELLBEING.**
   Sweden, Australia, United Kingdom, Germany, United States, Spain, Japan, and South Korea have high levels of wellbeing, defined as the top third of scores in the range for overall wellbeing.

3. **YOUTH HAVE THE HIGHEST LEVELS OF WELLBEING IN THE EDUCATION DOMAIN; HOWEVER, NOT ENOUGH YOUNG PEOPLE ARE GETTING THE PREPARATION THEY NEED TO BE SUCCESSFUL IN WORK AND LIFE.**
   Across Index countries, youth are doing best in the education domain, likely because of sustained government and donor investments in education over the last 30 years. At the same time, a paucity of data makes it very difficult to consistently and accurately measure educational quality.

4. **ALTHOUGH YOUNG PEOPLE EXPRESS OPTIMISM ABOUT THEIR ECONOMIC FUTURES, INDEX COUNTRIES HAD THE LOWEST OVERALL SCORES IN ECONOMIC OPPORTUNITY.**
   Seventy-four percent of youth surveyed across Index countries feel they will be able to get the kind of job they want, and 65 percent feel they will be able to make as much money as they want. High rates of youth who are not in employment, education, or training (NEETs) in many Index countries explain the discouraging domain score.

The Global Youth Wellbeing Index includes 35 indicators across seven domains:
5. THE OVERWHELMING MAJORITY OF YOUNG PEOPLE SURVEYED SUPPORT EQUALITY BETWEEN WOMEN AND MEN.
Almost 90 percent of youth surveyed by IYF agreed with the statement “Women should have all the same rights as men.” While young people are ready for gender equality, objective data suggests that equality remains elusive.

6. YOUNG PEOPLE URGENTLY NEED BETTER ACCESS TO MENTAL HEALTH CARE.
More than half of youth participating in IYF’s Global Millennial Viewpoints Survey said the way they feel gets in the way of school, a job, or life. Half felt that their lives are too stressful. Many Index countries see persistently high rates of youth suicide.

7. ROAD-RELATED ACCIDENTS REMAIN THE LEADING CAUSE OF DEATH FOR YOUTH WORLDWIDE.
Over a 25-year period from 1990 to 2015, Index countries have reduced youth road-related fatalities by only 21 percent. Middle-income countries account for 90 percent of traffic-related deaths.

8. TOO MANY YOUNG PEOPLE SURVEYED FEEL THAT THEIR GOVERNMENT DOES NOT CARE ABOUT THEM.
IYF’s Global Millennial Viewpoints Survey revealed that 2 out of 3 youth believe that their government does not care about their wants and needs.

9. YOUNG PEOPLE ARE USING PHONES RATHER THAN COMPUTERS.
Youth in the least developed countries lack robust internet access through computers; they rely on their phones to get information. Less than half of youth have access to the internet at home, but on average every person in an Index country has 1.2 cell phone accounts.

10. MILLIONS OF YOUNG PEOPLE, MOST OF THEM MEN, ARE USING TOBACCO.
The World Health Organization estimates that in 2015 over 1.1 billion people worldwide—including far more men than women—used tobacco products. Although tobacco use is declining worldwide, in half of Index countries 20 percent or more of youth are smoking or chewing tobacco products.
Scores by Country

The chart below includes overall and domain scores for each country featured in the Index. Countries are listed in order of their overall performance, and Sweden ranks first, with a score of 0.83 out of 1.0.

1. SWEDEN
2. AUSTRALIA
3. UNITED KINGDOM
4. GERMANY
5. UNITED STATES
6. SPAIN
7. JAPAN
8. SOUTH KOREA
9. CHINA
10. INDONESIA
11. PERU
12. SAUDI ARABIA
13. MEXICO
14. GHANA
15. JORDAN
16. MOROCCO
17. COLOMBIA
18. PHILIPPINES
19. KENYA
20. TURKEY
21. BRAZIL
22. SOUTH AFRICA
23. RUSSIA
24. THAILAND
25. VIETNAM
26. INDIA
27. UGANDA
28. EGYPT
29. NIGERIA

---

1 Due to regulations issued by the Government of Tanzania, which require that all datasets and research regarding the country be submitted for approval to the National Bureau of Statistics, results for Tanzania are not included in the Index presentations. However, data for Tanzania remains in the Index computations to maintain accurate results for all countries.
